OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
coho salmon	1993	X		X	<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: I examined this stream system by foot survey during a Forest Practices Inspection in 1993 to determine extent of anadromous fish habitat under the FRPA, and found adult coho salmon bones up to a small jump at the point indicated on the attached maps. I believe it likely is also used by rearing coho salmon, but did not verify that since we were only looking for evidence of use by anadromous fish. Add tributary to the Catalog and Atlas, and add COs to the listing for -4028 which currently has only CO.

Name of Observer (please print):

James D. Durst, Habitat Biologist
